

PRODUCT DATA SHEET: WEB PORTALS ONE

Web Portals One provides remote access to SAP Business One functions via the Web. Companies needing to communicate, and transact business with customers, partners, and vendors, can now allow secured web-based access to orders, activity status, contracts, and service calls. Web Portals One also allows internal employees to enter time & expenses, maintain service calls, and view their calendar anywhere the Internet can be accessed

PRODUCT OVERVIEW

Companies looking to communicate better with their customers, suppliers and internal employees, will find great value in using Web Portals One. Secured and limited visibility into SAP Business One can be given to customers, vendors, and partners, so sales orders, purchase orders, service calls, contracts and activities can be updated and viewed via the web. It is a must-have for companies with an outside sales force or field service technicians.

With *Web Portals One*, Internal employees can now remain up-to-date with their current calendars, and maintain sales and service activities using the Internet from anywhere in the world. Field service technicians can enter their time and expenses with mileage, labor and materials. Outside sales people can enter in

quotes or orders while keeping up-to-date on customer profile information. Project-based employees can also view their submitted, accepted, and rejected activities thus giving the power of SAP Business One and Project One to those in the field.

Customers can enter in quotes and orders on behalf of their company. They can also launch service calls, maintain contact information, view invoices and see the status of what is to be shipped and when.

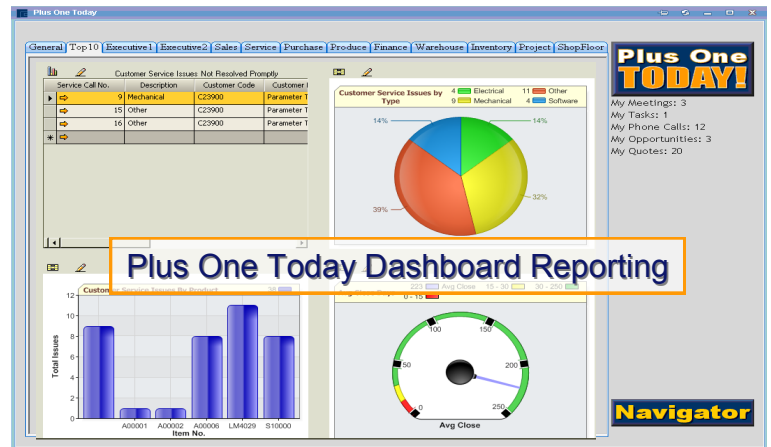

Channel Partners can also access the same functionality as customers via the web.

Vendors can view new purchase orders and update production orders being submitted as well as update production orders and shipments, They can also verify and update pricing.

Web Portals One allows users to have access to Business One *Crystal Reports*, and the *Plus One Today* dashboard. With any report or dashboard view, the user is given permission to view what can be made available. Beyond that, users can view Business One alerts and messages, so to give the power of SAP Business One to remote users. This is a must-have for any company wanting to communicate better with select employees or companies, so that all parties can be on the same page.

Web Portals One is the best solution for any remote user who wants to communicate with a cutting-edge company who already utilizes the power of SAP Business One.
